A 555 can be used to generate clock pulses in a wide range of frequencies with enough output power to drive several ICs. The oscillation frequency is calculated with the following formula: The same circuit can be used to control DC loads such as LEDs, lamps and DC motors. The idea is to use this circuit as a PWM signal generator.

It turns out that there are many uses for two (or more) 555 timers in a single electronic circuit — useful enough that you can get two 555 timers in a single chip, called the 556 dual-timer chip. The 556 dual-timer chip comes in a 14-pin DIP package. The two 555 timers share a common supply and ground pin.
