Announcing ASP.NET Core 2.0 | ASP.NET Blog
Last week we announced the release of ASP.NET Core 2.0 and described some top new features, including Razor Pages, new and updated templates, and Application Insights integration. In this blog post we are going to dig into more details of features in 2.0. This list is not exhaustive or in any particular order, but highlights a number of interesting and important features.

ASP.NET Core 2.0 Features | ASP.NET Blog
Although it seems like magic (how did your settings get loaded!), ASP.NET Core 2.0 hides the adding of configuration settings behind CreateDefaultBuilder() method of WebHost, in Program.cs. IConfiguration is then added to the service container and is available in the rest of your application. We used this in Startup to add options.

ASP.NET Core 2.0 Configuration - c-sharpcorner.com
Covers the basics of migrating an ASP.NET Core 2.0 app to 2.1. Provides an overview of the changes to the ASP.NET Core web application templates. A quick way to get an overview of the changes in 2.1 is to: Create an ASP.NET Core 2.0 web app named WebApp1.
