Basic Refrigeration and Air

Read Free Basic Refrigeration And Air Conditioning By Ananthanarayanan **Conditioning: P. N ...**

Principles of Refrigeration. Liquids absorb heat when changed from liquid to gas. Gases give off heat when changed from gas to liquid. For an air conditioning system to operate with economy, the refrigerant must be used repeatedly. For this reason, all air conditioners use the same cycle of

compression, condensation, expansion, and evaporation in a closed circuit.

Air Conditioning - Basic Refrigeration Cycle

Air conditioning is a type of refrigeration where thermal energy is taken away from the air in a large space such as a room or a vehicle. Air conditioners are

fitted into rooms so that they cool the air inside them.

Difference Between Refrigeration and Air Conditioning

In refrigeration, the apparatus supplies thermal energy from one place to a place of higher temperature whereas in air conditioning, the thermal energy is

Read Free Basic Refrigeration And Air Conditioning By Ananthanarayanan

taken from the air in order to cool the air. Naturally, thermal energy can be seen flowing from higher temperature bearing place to lower temperature bearing place.

Introduction HVAC

In any central air conditioning unit we will have five basic mechanical components: a compressor, a condenser, an expansion device (metering device), an evaporator and a refrigeration copper tube that connects them. In the typical split-air conditioning system, the four basic components are
