The PING command operates on the Network layer and uses the services of the ICMP protocol. It is the first command that you should use at the beginning of your troubleshooting process. With PING you can test whether a remote host is alive by transmitting echo request messages and receive echo replies from the specific host.

Cisco Network Troubleshooting for Beginners | Pluralsight

Troubleshooting is about three big things: predicting what can happen, determining the anomalies, and investigating why that anomalies happened. Many network admins break down network infrastructure problems by analyzing the Layer 3 path through the network, hop by hop, in both directions.
