A 30-year-old female of Black African ancestry presented with a mass in the lower one-third of her right upper leg. She complained of pain in this leg, especially in the evening hours. The patient is known to have multiple cutaneous nodules over her body as well as café au lait spots (Fig. 1). Echography of her upper leg showed a hypo-echoic complex tumour of 30×35.6cm with a gross capsule ...

### Soft tissue pathology - Current Diagnostic Pathology

Soft tissue pathology Questions Question 1 A 41-year-old man presented with a small firm painless mass in the thigh. The lump had been present for at least two years and had gradually increased in size. Imaging showed a well-circumscribed mass, 5.5 cm in diameter, within the belly of vastus medialis and a needle biopsy was performed.
