originated in the irrational, psychological needs of a few prominent thinkers. Subjecting the apostles of atheism to the same psychological analysis with which they attempted to debunk religious belief, Vitz reveals the source of a psychological predisposition to atheism -- the absence of a good father.

Faith of the Fatherless
Does belief in God
come from an "infantile
need for security?"
That's what
psychiatrists have
taught for over a
century: Those who
espouse Christian faith
suffer from
psychological deficits.
But now a psychologist
is arguing that it is
atheists who suffer
from psychological
defects—and his

proposes another likely effect of the loss of the father on children: a distance from and doubt of God, which leads in many cases to profound atheism. Vitz develops his proposal as an inverse to Freud's projection theory of belief in God, which proposes "wish-fulfillment derived from childish needs for protection and security" as the major psychological factor
