DNA Fingerprint is a DNA profiling technique used to identify a criminal. Research papers on DNA fingerprint evidence explicate the difference between regular fingerprint evidence and DNA fingerprint evidence and focus on what criminal justice experts call the "DNA fingerprint". Traditionally, research papers on the term "fingerprint" refer to patterns that are highly characteristic to an individual's ridged skin of the distal finger phalanges.

Fingerprint Recognition Research Papers - Academia.edu

Fingerprint analysis generally involves comparing fingerprints found at a crime scene — called latent fingerprints — with fingerprints from a known individual and assessing how similar they are. A trained fingerprint examiner makes that assessment by comparing details including the shapes that the ridge lines form and where the lines end or split.
