There are three pairs of major global wind systems, or wind belts: trade winds, westerlies, and polar easterlies. Trade winds are wind belts that blow from 30° latitude almost to the equator. They curve to the west as they blow toward the equator. Westerlies are wind belts that are found between 30° and 60° latitude.

Quiz & Worksheet - The Three Wind Belt Patterns | Study.com

Patterns: Air patterns are analyzed and used to predict weather systems. 2.) Cause and Effect: The effect of Earth's rotation causes air to move. The Sun heats the Earth unevenly, causing convection currents. 4.) Systems and Models: The movement of air along with Earth's rotation causes convection currents to interact, creating multiple wind patterns. The model used to display wind patterns illustrates interactions of moving water air, sun, and Earth's rotation.
