Students learn that an inequality is a mathematical sentence that states that two expressions are not equal. For example,  $x < 9$ , which is read, "x is less than 9", means that any number less than 9 is a solution to the inequality.

### Inequalities - Introduction to Inequalities

Comparing things with other things is what usually we do, in mathematics or in other branches of science which deal with mathematical tools, and we describe the results, when they contain at least one of  $<$  or  $>$ , as an inequality. Because of the importance of inequalities, particularly when making required approximations, several mathematicians attempted systematic studies on them at various levels.
