## **Linux**

driver. The Linux kernel device drivers are, essentially, a shared library of privileged, memory resident, low level hardware handling routines. It is Linux's device drivers that handle the peculiarities of the devices they

## **Chapter 8**

# Read Free Linux Device Drivers Where The Kernel Meets The Hardware

For drivers that have no bus-specific fields (i.e. don't have a bus-specific driver structure), they would use `driver_register` and pass a pointer to their struct `device_driver` object. Most drivers, however, will have a bus-specific structure and will need to register with the bus using something like `pci_driver_register`.
