Mechanics of wood machining (eBook, 2013) [WorldCat.org]

The optimization of the machining process centers around the mechanism of chip formation, tool wear, workpiece surface quality, crack initiation and propagation of different types of wood. Other factors are also humidity, temperature, static preloads, and vibrations that can affect the wood during the machining process.

Machinist Training - TPC Training

When I went to school for machining, I worked on a bunch of different projects that taught me the basics of the trade. From keychains to hammers, I did all the typical stuff. One thing that I found out after the program, though, is that the chess pieces and keychains were quickly lost, but the tools I made are still in my box and used daily 12 ...
