docutils project, amended by custom directives and using a toolset named Sphinx to post-process the HTML output.

7. Documenting Python — Python Developer's Guide

The Python Language Reference¶ This reference manual describes the syntax and “core semantics” of the language. It is terse, but attempts to be exact and complete. The semantics of non-essential built-in object types and of the built-in functions and modules are described in The Python Standard Library.

Python HOWTOs¶. Python HOWTOs are documents that cover a single, specific topic, and attempt to cover it fairly completely. Modelled on the Linux Documentation Project's HOWTO collection, this collection is an effort to foster documentation that's more detailed than the Python Library Reference.

Python HOWTOs — Python 3.9.0 documentation

Documenting your Python code is all centered on docstrings. These are built-in strings that, when configured correctly, can help your users and yourself with your project's documentation. Along with docstrings, Python also has the built-in function `help()` that prints out the objects docstring to the console. Here's a quick example:

markup language used, specific formats, and style recommendations. Looking at pre-existing documentation source files can be very helpful when getting started.

6. Helping with Documentation — Python Developer's Guide

This page is primarily about tools that help, specifically, in generating documentation for software written in Python, i.e., tools that can use language-specific features to automate at least a part of the code documentation work for you. The last section also lists general documentation tools with no specific support for Python (though some of them are themselves written in Python).

DocumentationTools - Python Wiki

When documenting Python code, it is common to put a lot of documentation in the source files, in documentation strings.
