Interesting little book I downloaded from Gutenberg covering the history of astronomy up to 1909 or so. Of course the two pillars of modern physics, quantum mechanics & relativity, are absent, and this makes for some fascinating differences in perspective.

History of Astronomy by George Forbes - Goodreads

Astronomy is the oldest of the sciences. When Stoneage humans turned to an agrarian way of life and began to settle into communities, their interest must naturally have turned to the "heavens": The seasons became important; during different times of the year, different stellar patterns appear in the sky.

Ancient Greece. Astronomy is present from the beginning of Greek literature. In Homer 's Iliad and Odyssey, stars and constellations are mentioned, including Orion, the Great Bear (Ursa Major), Boötes, Sirius, and the Pleiades. More-detailed astronomical knowledge is found in Hesiod 's Works and Days, from perhaps a generation later than Homer.
