With any luck, some of the seeds will grow new healthy grass plants. (This site explains grass reproduction in detail.) In some grasses, such as corn, the stem and the flowering part of the plant are obvious. But in lawn grasses, the long thin leaves overshadow the other elements of the plant. Unless you're up close, all you see is green stalks.

Plant defense against herbivory or host-plant resistance (HPR) describes a range of adaptations evolved by plants which improve their survival and reproduction by reducing the impact of herbivores. Plants can sense being touched, and they can use several strategies to defend against damage caused by herbivores. Many plants produce secondary metabolites, known as allelochemicals, that influence ...
