Productivity describes various measures of the efficiency of production. Often, a productivity measure is expressed as the ratio of an aggregate output to a single input or an aggregate input used in a production process, i.e. output per unit of input, typically over a specific period of time. Most common example is the (aggregate) labour productivity measure, e.g., such as GDP per worker.

From the functionalist perspective, if all goes well, the parts of society produce order, stability, and productivity. If all does not go well, the parts of society must adapt to produce new forms of order, stability, and productivity. Functionalism emphasizes the consensus and order that exist in society, focusing on social stability and shared public values.
