See additional information. Undulant fever: An infectious disease due to the bacteria Brucella that characteristically causes rising and falling fevers, sweats, malaise, weakness, anorexia, headache, myalgia ( muscle pain) and back pain. The disease is called undulant fever because the fever is typically undulant, rising and falling like a wave. It is also called brucellosis after its bacterial cause.

## **Definition of Undulant fever**

Brucellosis is a highly contagious zoonosis caused by ingestion of unpasteurized milk or undercooked meat from infected animals, or close contact with their secretions. It is also known as undulant fever, Malta fever, and Mediterranean fever. Brucella species are small, Gram-negative, nonmotile, nonspore-forming, rod-shaped bacteria. They function as facultative intracellular parasites, causing chronic disease, which usually persists for life. Four species infect humans: *B. abortus*, *B. canis*, *B.*
