That I know of, MS Visual Studio (Express) does not let you compile and run single files, you must create a project, even if its a single file in a project. You can choose and empty project and you specify files to #include, or pick either a win32 console or win32 form project that gives you a precompiled header with most common #include files ...

Solution Explorer is Empty (Blank)

Create solutions and projects. Projects hold the items needed to build your app in Visual Studio, such as source code files, bitmaps, icons, and component and service references. When you create a new project, Visual Studio creates a solution to contain the project. You can then add other new or existing projects to the solution if you want.
