the outer edges of the energy field, some 7,000 light years away from the center.

Great Barrier | Memory Alpha | Fandom

The Great Barrier Reef is an astounding natural ecosystem with all of this marine life and the coral reef itself. In fact, the reef is made up of tiny organisms known as coral polyps. These billions of coral polyps bound together have constructed this intricate coral reef system. It stretches an impressive 2,300km along the eastern coast with a little over 3,000 coral reef systems.
